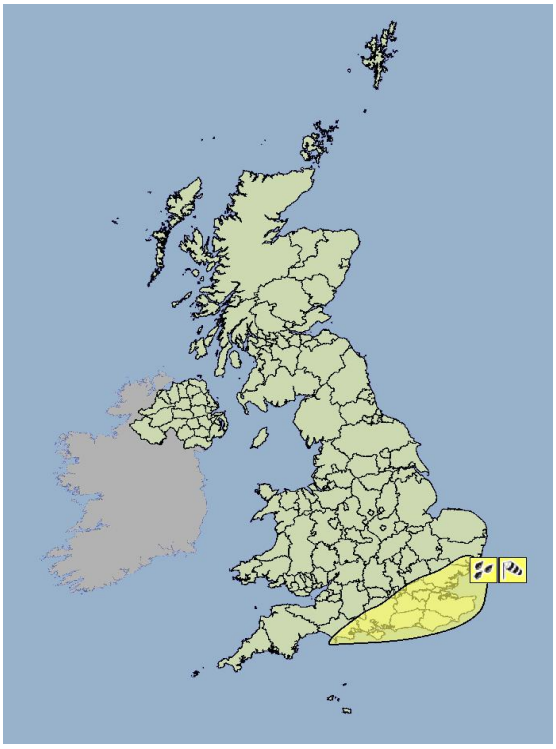
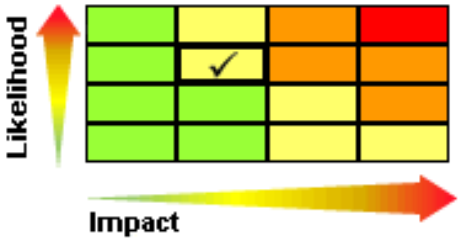
National Severe Weather Warning Service





Chief Forecasters Assessment
20-30 mm of rain could fall within a 6-12 hour period. Although these amounts of rain are not unusual, when combined with gales some localised impacts are expected. Conditions are expected to improve from the southwest later on Sunday.

There remains some uncertainty about the exact track of the weather system and therefore the northward extent of any impacts.

The Met Office have issued a **Yellow Warning** of **Rain and Wind**

Valid from **00:05 on Sun, 20th Nov 2016** until **15:00 on Sun, 20th Nov 2016**

A vigorous area of low pressure is expected to move northeast across southern Britain on Sunday. This will be accompanied by a period of heavy rain and southwesterly gales. Gusts of 45-55 mph could occur inland, particularly over Sussex and Kent, with gusts of 60-65 mph possible in exposed south coastal locations.

Please be aware of the risk of difficult driving conditions due to localised surface water flooding and possible debris from trees.
